

In the portfolio of decorative foils we offer since long products with “AB technology”, for example ALUDECOLUX® Butlerfinish SR AB and Butlerfinish HA AB. This technology has an antibacterial effect thanks to specific silver ions (no use of nano-silver).

External tests made by an independent test institute have now shown that these products are also effective against the feline coronavirus, strain Munich and Influenza H1N1.

Testing was made according to BS ISO 21702:2019 standard.

If you are interested in further information please contact us at any time.
