

# Recyclable synthetic paper

## MONOTEX® L 170 BE PRO

### MONOTEX® L 170 BE PRO is recyclable

"The greatest danger to our planet is the belief that someone else will save it." (Robert Swan)

For this very reason, Féron is actively working on sustainable product revolutions. The first step has been taken.

Féron's MONOTEX® L 170 BE PRO is recyclable!

This fact is certified by the independent and renowned institute cyclos-HTP from Aachen, Germany. This makes our product one of the first recyclable synthetic papers for laser printing applications.

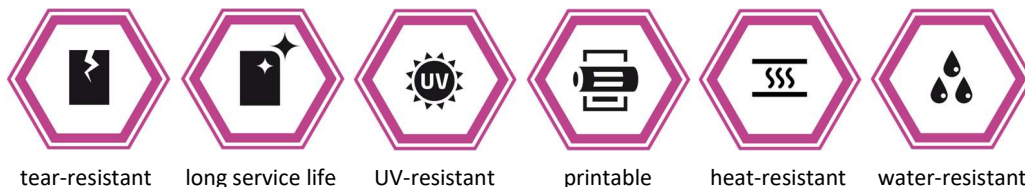

But this is only the beginning: Soon, further innovations in the field of MONOTEX® and TRITEX® will be presented. In addition to the recyclability of our product, it is also important to use raw materials with the highest possible recycling content in the future. In this way, we can make our important contribution to the circular economy following the cradle-to-cradle approach.

FERON Print/ May 2022

### Disposal information:

A recyclability certificate from the Cyclos-HTP Institute is available for MONOTEX® L 170 BE PRO. According to the certificate, 93% of the product is recyclable and can therefore be recycled in path 7: mixed polyolefins / mixed plastics (flexible). The recyclability refers to the delivery condition of our product and can be influenced by further processing/converting steps.
